

Test the off-peak period

If you are unsure whether you have created a correct off-peak period definition, you may use the test utility to check if a specific moment in time fits into the period or not. In order to run the off-peak period test, either click the  icon on the off-peak periods page, or use the **Test Period** button on the last page of the off-peak period wizard.

The screenshot shows a dialog box titled "Test Period". It has a "Date and Time" section with a date of "2009-12-28" and a time of "02:00". Below that is a "Period" section with the value "startstop:hr{1-8} wd{mo-fr}". Under "Period Description", there is a text area containing the text "From 01:00 until 04:00, Workdays of any month". At the bottom is a "Test!" button.

Now simply enter any time / date and click the Test button to check whether this moment fits into the off-peak period definition.
